DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The rejections, of claims 1 and 24 under 35 U.S.C. 102, have been overcome by Applicant's amendment filed August 23, 2006.

Response to Amendment Regarding

2. **STATUS:** The rejection of claims 2-23 and 25-28 under 35 U.S.C. 103 set forth in the Office action dated May 19, 2006 has been maintained for the reasons of record for the reasons set forth herein.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bilodeau et al. (WO 01/17995).

Applicant claims salt forms of 4-[2-(5-cyano-thiazol-2-ylamino)-pyridin-4-ylmethyl]-piperazine-1-carboxylic acid methylamide as tyrosine kinase inhibitors. Additionally, Applicant claims different salts of 4-[2-(5-cyano-thiazol-2-ylamino)-pyridin-4-ylmethyl]-piperazine-1-carboxylic acid methylamide characterized by different X-ray powder diffraction patterns having different diffraction angles and melting endotherms.

Bilodeau discloses claims salt forms of 4-[2-(5-cyano-thiazol-2-ylamino)-pyridin-4-ylmethyl]-piperazine-1-carboxylic acid methylamide as tyrosine kinase inhibitors, which share the same formulaic compounds.

Bilodeau does not disclose 4-[2-(5-cyano-thiazol-2-ylamino)-pyridin-4-ylmethyl]-piperazine-1-carboxylic acid methylamide characterized by different X-ray powder diffraction patterns having different diffraction angles and melting endotherms, however, one skilled in the art would find the differences in the teaching to be negligible.

Thus, it would have been obvious to one of ordinary skill in the art at the time of invention to combine the teachings of Bilodeau to obtain the salt forms in the instant application. All of the moieties are taught in the art. Obviousness based on similarity of structure and functions entails motivation to make the claimed compound in expectation that compounds similar in structure will have similar properties. Therefore, one of ordinary skill in the art would be motivated to make the claimed compounds in searching for new salt forms with tyrosine kinase activity. See *In re Payne*, 203 USPQ 245 (CCPA 1979). Since Applicant's claims are prima facie obvious in view of the teachings of Bilodeau, Applicant's claims are rejected under 35 U.S.C. § 103.

Applicant's arguments filed August 23, 2006 have been fully considered but they are not persuasive. Applicant contends that the salt forms have an unexpected advantage, and thus, have an unexpectedly superior oral activity profile. However, Applicant's arguments are misplaced.

Bilodeau discloses claims salt forms of 4-[2-(5-cyano-thiazol-2-ylamino)-pyridin-4-ylmethyl]-piperazine-1-carboxylic acid methylamide as tyrosine kinase inhibitors.

Applicant claims different salts of 4-[2-(5-cyano-thiazol-2-ylamino)-pyridin-4-ylmethyl]-piperazine-1-carboxylic acid methylamide characterized by different X-ray powder diffraction patterns having different diffraction angles and melting endotherms. It would have been obvious to one of ordinary skill in the art at the time of invention to combine the teachings of Bilodeau to obtain the salt forms in the instant application. All of the moieties are taught in the art. Obviousness based on similarity of structure and functions entails motivation to make the claimed compound in expectation that compounds similar in structure will have similar properties. Therefore, one of ordinary skill in the art would be motivated to make the claimed compounds in searching for new salt forms with tyrosine kinase activity. See *In re Payne*, 203 USPQ 245 (CCPA 1979). Since Applicant's claims are prima facie obvious in view of the teachings of Bilodeau, Applicant's claims are rejected under 35 U.S.C. § 103.

Conclusion

Claims 1-24 are pending. Claims 1-24 are rejected. No claims are allowed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 1624

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
